

IP Lab for XTran Service Engineers

Course description

- **Target Audience**

XTran Service Engineers who need the skills to configure and troubleshoot XTran networks with advanced Ethernet/IP features. This training is only hands-on.

- **Course Prerequisites**

The course certificate “XTran for Service Engineers – Advanced ETH/IP Module”.
Solid knowledge on Ethernet (Layer 2) and IP (Layer 3) protocols.
Experience with troubleshooting techniques.

- **Course Objectives**

After the training, the students should be able to configure and test a full “IP-over-XTran” network.

- **Exercises**

Hands-on training only.
This training is restricted to maximum 4 people at once and it is only available at our HQ facilities.

- **Duration**

3 days

Contents

- **Exercises**

The trainee is gradually building up a full ‘IP-over-XTran’ network configuration by assembling, troubleshooting and testing all needed IP protocols and other elements.
